FilterMax™ F3 and FilterMax™ F5
Multi-Mode Microplate Reader

User Guide

5008528 A
September 2010
This document is provided to customers who have purchased Molecular Devices, Inc. ("Molecular Devices") equipment, software, reagents, and consumables to use in the operation of such Molecular Devices equipment, software, reagents, and consumables. This document is copyright protected and any reproduction of this document, in whole or any part, is strictly prohibited, except as Molecular Devices may authorize in writing.

Software that may be described in this document is furnished under a license agreement. It is against the law to copy, modify, or distribute the software on any medium, except as specifically allowed in the license agreement. Furthermore, the license agreement may prohibit the software from being disassembled, reverse engineered, or decompiled for any purpose.

Portions of this document may make reference to other manufacturers and/or their products, which may contain parts whose names are registered as trademarks and/or function as trademarks of their respective owners. Any such usage is intended only to designate those manufacturers’ products as supplied by Molecular Devices for incorporation into its equipment and does not imply any right and/or license to use or permit others to use such manufacturers’ and/or their product names as trademarks.

Molecular Devices makes no warranties or representations as to the fitness of this equipment for any particular purpose and assumes no responsibility or contingent liability, including indirect or consequential damages, for any use to which the purchaser may put the equipment described herein, or for any adverse circumstances arising therefrom.

For research use only. Not for use in diagnostic procedures.

Safety Information

All Warnings and Cautions in this document include an exclamation point, a lightning bolt, or a light burst symbol framed within a triangle. Please pay special attention to the specific safety information associated with these symbols.

**WARNING!** If the equipment is used in a manner not specified by Molecular Devices, the protection provided by the equipment may be impaired.

Warning and Caution Definitions

The exclamation point symbol is an international symbol which serves as a reminder that all safety instructions should be read and understood before installation, use, maintenance, and servicing is attempted.

When this symbol is displayed in this manual, pay special attention to the specific safety information associated with the symbol.

**WARNING!** A WARNING calls attention to a condition or possible situation that could cause injury to the operator.

**CAUTION!** A CAUTION calls attention to a condition or possible situation that could damage or destroy the product or the operator’s work.

Electrical Safety

To prevent electrically related injuries and property damage, properly inspect all electrical equipment prior to use and immediately report any electrical deficiencies. Contact a Molecular Devices service representative for any servicing of equipment requiring the removal of covers or panels.

**High Voltage**

**WARNING!** HIGH VOLTAGE! This symbol indicates the potential of an electrical shock hazard existing from a high voltage source and that all safety instructions should be read and understood before proceeding with the installation, maintenance, and servicing of all modules.

Do not remove system covers. To avoid electrical shock, use supplied power cords only and connect to properly grounded (three-holed) wall outlets. Use only multiplug power strips provided by the manufacturer.

Do not remove system covers. To avoid electrical shock, use supplied power cords only and connect to properly grounded (three-holed) wall outlets. Use only multiplug power strips provided by the manufacturer.
Chemical and Biological Safety

Normal operation of the FilterMax™ F3 or FilterMax™ F5 Multi-Mode Microplate Reader may involve the use of materials that are toxic, flammable, or otherwise biologically harmful. When using such materials, observe the following precautions:

- Handle infectious samples according to good laboratory procedures and methods to prevent the spread of disease.
- Observe all cautionary information printed on the original solutions containers prior to their use.
- Dispose of all waste solutions according to your facility’s waste disposal procedures.
- Operate the FilterMax Multi-Mode Microplate Reader in accordance with the instructions outlined in this manual, and take all the necessary precautions when using pathological, toxic, or radioactive materials.
- Splashing of liquids may occur; therefore, take appropriate safety precautions, such as using safety glasses and wearing protective clothing, when working with potentially hazardous liquids.
- Use an appropriately contained environment when using hazardous materials.
- Observe the appropriate cautionary procedures as defined by your safety officer when using flammable solvents in or near a powered-up instrument.
- Observe the appropriate cautionary procedures as defined by your safety officer when using toxic, pathological, or radioactive materials.

Note: Observe all warnings and cautions listed for any external devices attached or used during operation of the FilterMax Multi-Mode Microplate Reader. Refer to applicable external device User Guides for operating procedures of that device.

Moving Parts

To avoid injury due to moving parts, observe the following:

- Never attempt to exchange labware, reagents, or tools while the instrument is operating.
- Never attempt to physically restrict any of the moving components of the FilterMax Multi-Mode Microplate Reader.
- Keep the FilterMax Multi-Mode Microplate Reader work area clear to prevent obstruction of the movement.

Cleaning

Observe the cleaning procedures outlined in this User Guide for the FilterMax Multi-Mode Microplate Reader. Prior to cleaning equipment that has been exposed to hazardous material:

- Appropriate Chemical and Biological Safety personnel should be contacted.
- The Chemical and Biological Safety information contained in this User Guide should be reviewed.
Maintenance

Perform only the maintenance described in this manual. Maintenance other than that specified in this manual should be performed only by service engineers.

**Note:** It is your responsibility to decontaminate components of the FilterMax Multi-Mode Microplate Reader before requesting service by a Molecular Devices Service Engineer or returning parts to Molecular Devices for repair. Molecular Devices will NOT accept any items which have not been decontaminated where it is appropriate to do so. If any parts are returned, they must be enclosed in a sealed plastic bag stating that the contents are safe to handle and are not contaminated.

Warnings and Cautions Found in this Manual

Please read and observe all cautions and instructions. Remember, the most important key to safety is to operate the FilterMax Multi-Mode Microplate Reader with care.

The WARNINGS and CAUTIONs found within this document are listed below.

**WARNING!** If the equipment is used in a manner not specified by Molecular Devices, the protection provided by the equipment may be impaired.

**WARNING!** The FilterMax Multi-Mode Microplate Reader uses a deuterium lamp, which emits UV radiation. Never view light from the deuterium lamp directly without approved eyewear. Protect skin from exposure to the light emitted by the lamp.

**CAUTION!** Warranty claims are void if damage during transport is caused by improper packing.

**CAUTION!** The microplate transport may be damaged if the transport lock is not removed before the instrument is powered on.

**CAUTION!** Turn off main power to the instrument before connecting it to the host computer.

**CAUTION!** Handle filter slides by the tab only. Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

**CAUTION!** Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

**CAUTION!** Do not overtighten the screw that secures the filter being installed. Overtightening the screw may damage the filter and degrade measurement performance.
CAUTION! Filter surfaces are extremely fragile and should be cleaned only when noticeable contamination, such as dust and fingerprints, are visible on the surface. Filters should be cleaned by experienced users only.

CAUTION! Use only oil-free compressed air, nitrogen, or canned dusters that do not use freon or similar propellents to blow dust from the filter. Other sources of compressed gas may leave a residue on the filter surface.

WARNING! Turn off power and disconnect the instrument from the power source before performing maintenance on the instrument. There is a risk of electric shock when the power is on.

WARNING! Never view light from the deuterium lamp directly without approved eyewear. Protect skin from exposure to the light emitted by the lamp. The lamp emits UV radiation.

WARNING! Turn off the instrument and allow a minimum of 30 minutes for the deuterium lamp to cool before servicing. During operation, the lamp reaches a temperature of approximately 250°C (482°F).

WARNING! The deuterium lamp may be hot. Handle with caution until it cools.

CAUTION! CAUTION: Do not touch the glass of the new lamp. Fingerprints on the glass may shorten the life of the lamp.

WARNING! Turn off and unplug power to the instrument before changing fuses. Failure to do so can cause electrical shock or equipment damage.

WARNING! Only officially trained service engineers may perform service procedures on the instrument. Contact a service engineer when service is required.

CAUTION! The transport lock must be installed to prevent the possibility of damage to the microplate carrier during transit.

Setting Up and Operating the FilterMax Multi-Mode Microplate Reader

Overview

The FilterMax™ F3 and FilterMax™ F5 Multi-Mode Microplate Readers are computer-controlled multi-mode readers capable of performing absorbance, luminescence, and fluorescence intensity measurements on microplate samples (Figure 1-1). In addition, the FilterMax F5 Multi-Mode Microplate Reader is capable of performing fluorescence polarization and time-resolved fluorescence measurements. Both may be operated as standalone instruments, where microplates are loaded manually, or easily integrated with an automated laboratory system.

The FilterMax F3 Multi-Mode Microplate Reader provides the ability to perform:

- absorbance measurements at wavelengths between 340 nm and 650 nm.
- glow type luminescence measurements at wavelengths between 400 nm and 650 nm.
- fluorescence intensity measurements (top reading) at wavelengths between 340 nm and 650 nm.
- measurements on samples in 96-well and 384-well microplates.
- linear, orbital, and squared microplate shaking.

The FilterMax F5 Multi-Mode Microplate Reader provides the same abilities as the FilterMax F3 Multi-Mode Microplate Reader, and adds:

- a deuterium light source, which extends sensitivity into the deep UV band.
- absorbance measurements at wavelengths between 230 nm and 650 nm.
- glow type luminescence measurements at wavelengths between 400 nm and 750 nm.
- fluorescence intensity measurements (top reading) at wavelengths between 230 nm and 750 nm.
- fluorescence intensity measurements (bottom reading) at wavelengths between 300 nm and 650 nm.
- time-resolved fluorescence (TRF) measurements at wavelengths between 340 nm and 750 nm.
- fluorescence polarization (FP) measurements at wavelengths between 300 nm and 750 nm.
- measurements on samples in 6-well, 12-well, 24-well, and 48-well microplates.
- temperature control in the microplate chamber during measurements.

The FilterMax F3 and FilterMax F5 Multi-Mode Microplate Readers are operated remotely via a host computer using the supplied Multi-Mode Analysis Software. The software configures and performs all measurement types supported by the instruments, provides the ability to control instrument operations manually, and displays and saves measurement results. Refer to the Multi-Mode Analysis Software User Guide for more information.

Setting up and operating the FilterMax F3 or FilterMax F5 Multi-Mode Microplate Readers includes:

- Unpacking and Setting Up the Instrument on page 11.
- Preparing the Instrument to Perform Measurements on page 15.

**WARNING!** The FilterMax F5 Multi-Mode Microplate Reader uses a deuterium lamp, which emits UV radiation. Never view light from the deuterium lamp directly without approved eyewear. Protect skin from exposure to the light emitted by the lamp.
**Unpacking and Setting Up the Instrument**

Place the instrument on any dry, flat work area that has sufficient space for the instrument, host computer, and required cables. Setting up the instrument includes:

- Unpacking the instrument, removing the transport lock, and saving the original packaging. See **Unpacking the Instrument on page 11**.
- Physically setting up the instrument, connecting it to the host computer, and installing Multi-Mode Analysis Software. See **Setting Up the Instrument on page 13**.

**Unpacking the Instrument**

The packaging is specifically designed to protect the instrument during transportation. A transport lock protects the microplate carrier and transport by preventing movement during transit. The lock must be removed before turning on power to the instrument. Removing the transport lock requires a 2.0 mm Allen wrench, which is provided with the instrument.

**CAUTION!** Warranty claims are void if damage during transport is caused by improper packing.

To unpack the instrument:

1. Check the box for any visible damage during transportation. In case of damage, inform the supplier immediately and keep the damaged packing.
2. Open the box lid and remove the accessories box.
3. Carefully lift the instrument out of the box by the molded foam packaging encasing it.
4. Gently place the instrument on a dry, flat area.
5. Remove the molded foam packaging from the instrument and place it back in the shipping box.
6. Remove the plastic surrounding the instrument and discard.

**CAUTION!** The microplate transport may be damaged if the transport lock is not removed before the instrument is powered on.

7. Gently pull the plastic tab protruding from the microplate chamber door. The door opens, revealing the transport lock that fastens the microplate carrier to the internal frame of the instrument (Figure 1-2). The microplate carrier door must be held open manually while removing the transport lock.
Using the 2.0 mm Allen wrench, loosen screw #1 in the upper-left corner of the transport lock until the lock disconnects from the instrument frame (Figure 1-2). The screw is equipped with a retaining washer that prevents it from being removed from the lock.

Loosen screws #2 and #3 until the lock comes free of the carrier (Figure 1-2). The screws are equipped with retaining washers that prevent them from being removed from the lock.

Gently close the microplate chamber door.

Save the original carton, foam inserts, accessories box, and transport lock in case the instrument must be shipped in the future.
Setting Up the Instrument

Setting up the instrument includes selecting a suitable work area, installing excitation and emission filter slides, connecting the host computer, and installing the Multi-Mode Analysis Software, which controls all actions performed by the instrument.

To set up the instrument:

1. Place the instrument and host computer on a dry, flat work area with sufficient space for both devices and the required cables. To ensure adequate ventilation, a 20 cm to 30 cm (7.9 in. to 11.8 in.) gap should be left between the back of the instrument and wall.

2. Connect one end of the 9-pin serial cable to the serial port on the computer.

**CAUTION!** Turn off main power to the instrument before connecting it to the host computer.

3. Connect the other end of the 9-pin serial cable to the serial port on the back of the instrument (Figure 1-3).

**Note:** Use only the original serial cable supplied with the instrument. Other serial cables with identical connectors may not establish communication between the instrument and computer.

4. Connect the power cable to the power port on the back of the instrument (Figure 1-3) and to the wall socket.

---

**Figure 1-3** Power switch and connection ports

<tbody>
<tr>
<td>1</td>
<td>Serial port</td>
</tr>
<tr>
<td>2</td>
<td>Power switch</td>
</tr>
<tr>
<td>3</td>
<td>Power port</td>
</tr>
</tbody>
</table>
5. Turn on the power switch on the back of the instrument (Figure 1-3). The instrument performs an initialization procedure that moves the optics and microplate transports to home positions.

6. Remove the excitation filter slide from the toolbox supplied with the instrument. Excitation filter slides are identified by the EX or EXP printed on the slide tab.
   
   **FilterMax F5** : Slides labeled EXP may also house polarization filters, and are designed for use with the FilterMax F5 instrument only.

7. Open the filter compartment door on the front of the instrument.

8. Holding the excitation filter slide by the tab, orient it vertically, with the gear teeth on top, facing to the left of the instrument (Figure 1-4).

9. Align the slide in the track, and gently push it into the filter compartment until the motor automatically retracts it into position.

10. Remove the emission filter slide from the toolbox supplied with the instrument. Emission filter slides are identified by the EM or EMP printed on the slide tab.

   **FilterMax F5** : Slides labeled EMP may also house polarization filters, and are designed for use with the FilterMax F5 instrument only.

11. Open the filter compartment door on the front of the instrument.

12. Holding the emission filter slide by the tab, orient it horizontally, with the gear teeth on the right, facing up (Figure 1-4).

13. Align the slide in the track, and gently push it into the filter compartment until the motor automatically retracts it into position.

14. Turn on power to the host computer.

15. Install Multi-Mode Analysis Software on the computer (Refer to the *Multi-Mode Analysis Software User Guide*).
16. From the Start menu, choose Programs > Molecular Devices > Multi-Mode Analysis Software. The software launches and initializes the instrument transports.

Preparing the Instrument to Perform Measurements

Preparing the FilterMax Multi-Mode Microplate Reader to perform measurements includes:

- Starting up the Instrument on page 15.
- Exchanging Filter Slides on page 17.
- Selecting Microplate Types Suitable for Measurements on page 24.
- Loading and Unloading Microplates on page 25.

Starting up the Instrument

After turning on the power switch at the rear of the instrument, two LEDs on the front panel indicate the current status of the instrument (Figure 1-5):

- Continuous green: The instrument is ready for operation.
- Continuous green and amber: The instrument is busy: wait until the amber LED turns off before attempting to perform operations. Or the instrument operations are halted by an emergency stop: cancel the emergency stop to continue. See Performing an Emergency Stop on page 16.
- Flashing green: A problem occurred during initialization: the instrument is not ready for operation.
- Not illuminated: The instrument is not ready for operation.

Each time the instrument is turned on or Multi-Mode Analysis Software is launched, an initialization procedure automatically moves the optics and microplate transports to home positions.

For optimal performance, allow the instrument to warm up for 30 minutes before performing measurements.

FilterMax F5: When temperature control for the microplate chamber is set, reaching the desired temperature may take longer than 30 minutes.

</table>

Figure 1-5 Instrument status LEDs
Performing an Emergency Stop

If necessary, any instrument operation may be stopped immediately by performing an emergency stop. During an emergency stop, the instrument firmware is disabled, which prevents any further operations from being performed until the emergency stop is cancelled.

To perform an emergency stop:

1. On the front panel of the instrument, press **EX FILTER** and **EM FILTER** simultaneously (Figure 1-6). Both LEDs turn on and remain lit for the duration of the emergency stop.

2. If a filter slide unloads from the filter compartment, gently push it into the instrument until it is automatically retracted back into position.

To cancel an emergency stop:

- Turn the instrument off and on again. The instrument automatically initializes the plate and optics transports when the instrument is turned on.

OR

1. On the front panel of the instrument, press **EX FILTER** and **EM FILTER** simultaneously (Figure 1-6).
Exchanging Filter Slides

Filters used in measurements are mounted on two interchangeable slides, which are easily accessed from the front panel of the instrument (Figure 1-7). One slide is reserved for excitation filters used in absorbance and fluorescence measurements; the other for emission filters used in fluorescence and some luminescence measurements.

Slides may be quickly exchanged at any time between measurements. When a slide is exchanged, an identification code built into the slide allows the Multi-Mode Analysis Software to recognize the new slide and filter configuration. Up to 31 excitation and 31 emission slide configurations may be saved in the software at one time.

Slides hold up to six filters, and may be reconfigured as desired. Individual filters may be installed in, removed from, or moved to a different location on the same or different slide. See Installing, Removing, and Cleaning Filters on page 19 for detailed information about changing the filters installed on a slide.

This section covers:

- Exchanging Excitation Filter Slides on page 18.
- Exchanging Emission Filter Slides on page 18.

</tr>
</tbody>
</table>
Exchanging Excitation Filter Slides

Excitation filters are used in absorbance and fluorescence measurements to pass only the wavelength of light required for excitation. The excitation filter slide is oriented vertically on the left side of the filter compartment (Figure 1-7).

Excitation filter slides are identified by the EX or EXP printed on the slide tab. Slides labeled EXP may also house polarization filters, and are designed for use with the FilterMax F5 Multi-Mode Microplate Reader.

To exchange excitation filter slides:

1. On the front panel of the instrument, press EX FILTER. The slide unloads from the filter compartment and partially opens the compartment door.

   **CAUTION!** Handle filter slides by the tab only. Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

2. Open the compartment door all the way, grasp the slide by the tab, and pull it until it is free of the geared track.

3. Store the slide in a protected, dust-free area, preferably in the supplied toolbox.

4. Holding the new slide by the tab, orient it vertically, with the gear teeth on top, facing to the left of the instrument (Figure 1-7).

5. Align the slide in the track, and gently push it into the filter compartment until the motor automatically retracts it into position.

6. Close the compartment door completely to ensure the accuracy of measurements.

7. In the Multi-Mode Analysis Software, update or create the slide configuration, if necessary. Refer to the Multi-Mode Analysis Software User Guide.

   **Note:** The slide configuration needs to be modified only if the slide is not recognized by the software or if the filters installed on the slide have changed.

Exchanging Emission Filter Slides

Emission filters are used in fluorescence measurements to separate fluorescence generated by the sample from background light. The emission filter slide is oriented horizontally near the top of the filter compartment (Figure 1-7).

Emission filter slides are identified by the EM or EMP printed on the slide tab. Slides labeled EMP may also house polarization filters, and are designed for use with the FilterMax F5 Multi-Mode Microplate Reader.

To exchange emission filter slides:

1. On the front panel of the instrument, press EM FILTER. The slide unloads from the filter compartment and partially opens the compartment door.

   **CAUTION!** Handle filter slides by the tab only. Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

2. Open the compartment door all the way, grasp the slide by the tab, and pull it until it is free of the geared track.

3. Store the slide in a protected, dust-free area, preferably in the supplied toolbox.

4. Holding the new slide by the tab, orient it horizontally, with the gear teeth on the right, facing up (Figure 1-7).
5. Align the slide in the track, and gently push it into the filter compartment until the motor automatically retracts it into position.
6. Close the compartment door completely to ensure the accuracy of measurements.
7. In the Multi-Mode Analysis Software, update or create the slide configuration, if necessary. Refer to the Multi-Mode Analysis Software User Guide.

**Note:** The slide configuration needs to be modified only if the slide is not recognized by the software or if the filters installed on the slide have changed.

### Installing, Removing, and Cleaning Filters

Individual filters may be installed in, removed from, or moved to a different location on the same or different filter slide. However, when adding new filters it is strongly recommended to install them into a new filter slide. This leaves the original slide configuration in the required format for compliance testing.

**Note:** When using the Multi-Mode Validation Plate 0200-7200, validation tests are only provided for the standard supply of filters in their factory installed filter slider position.

**Note:** It is recommended that the original slide configuration be maintained and that additional filter slides be purchased for adding filters.

This section covers:
- Installing and Removing Excitation and Emission Filters on page 20.
- Cleaning Excitation and Emission Filters on page 22.
- Installing and Removing Polarization Filters (FilterMax F5 Multi-Mode Microplate Reader only) on page 23.
Installing and Removing Excitation and Emission Filters

Excitation and emission filters drop into one of the slots on the slide, and are secured by a 1.5 mm hex screw. A 1.5 mm Allen wrench is provided with the instrument.

To change an excitation or emission filter:

1. Using the provided 1.5 mm Allen wrench or a hex driver, loosen, but do not remove, the screw securing the filter to the filter slide (Figure 1-8).

   **CAUTION!** Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

2. Using the provided 1.5 mm Allen wrench or a hex driver, loosen, but do not remove, the screw securing the filter to the filter slide (Figure 1-8).

   **CAUTION!** Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

3. Grasp the filter by the edges and gently pull it free of the slot.

   **FilterMax F5:** If removing a filter from a slot housing a polarization filter, use tweezers to gently slide the polarization filter out far enough to allow the removal of the excitation or emission filter. Completely removing the polarization filter from the slide is not recommended. See Installing and Removing Polarization Filters (FilterMax F5 Multi-Mode Microplate Reader only) on page 23.
4. Store the filter in protective, dust-free packaging, preferably the original packaging supplied with the filter. Filters should be stored in a low humidity environment.

**Note:** Filters may be cleaned when noticeable contamination, such as dust and fingerprints, are visible on the filter surface. See Cleaning Excitation and Emission Filters on page 22.

5. Holding the new filter by the edges, gently place it in the desired slot. Excitation and emission filters are different sizes to prevent them from being installed on the wrong type of filter slide (refer to Table 1-1 for dimensions).

**Note:** Some excitation filters have a heat reflecting coating on one side which must face the light source. An arrow printed on the filter ring indicates the correct direction of light flow through the filter.

To install this type of filter, hold the excitation filter slide so that it is oriented correctly for installation in the instrument — vertically, with the gear teeth on top, facing to the left of the instrument. Place the filter in the desired slot with the arrow pointing from left to right.

**FilterMax F5:** If installing a filter in a slot housing a polarization filter, use tweezers to slide the polarization filter back into position over the filter. See Installing and Removing Polarization Filters (FilterMax F5 Multi-Mode Microplate Reader only) on page 23.

* On a filter slide for a FilterMax F5 reader, filters up to 10 mm (.39 in) thick may be used in slots where no polarization filter is housed.

**CAUTION!** Do not overtighten the screw that secures the filter being installed. Overtightening the screw may damage the filter and degrade measurement performance.

6. Use the provided 1.5 mm Allen wrench or a hex screwdriver to gently tighten the screw until the filter is secured.

7. When a new filter changes the slide configuration, take note of:
   - The wavelength and type of filter. Both are generally printed on the filter.
   - The slot where the filter is installed. The slot closest to the slider tab is slot 1; the slot furthest away is slot 6 (Figure 1-8).
   - The filter slide identification number printed on the slide.

This information must be edited in the slide definition before using the slide in measurements. Refer to the Multi-Mode Analysis Software User Guide.
Cleaning Excitation and Emission Filters

Excitation and emission filters may be cleaned; however, to minimize the risk of damaging the surface, filters should be cleaned only when the surface is noticeably dirty. Follow the guidelines in this section to safely and effectively clean filters.

**CAUTION!** Filter surfaces are extremely fragile and should be cleaned only when noticeable contamination, such as dust and fingerprints, are visible on the surface. Filters should be cleaned by experienced users only.

To clean filters:

1. Place a soft, clean cloth on the work surface to protect the filter in case it is accidentally dropped during cleaning.

2. Wear powder-free latex gloves or finger cots to reduce the risk of damaging the filter surface and to protect skin from cleaning solvents.

   **CAUTION!** Use only oil-free compressed air, nitrogen, or canned dusters that do not use freon or similar propellents to blow dust from the filter. Other sources of compressed gas may leave a residue on the filter surface.

3. Remove dust by blowing air from a canned duster or bulb-type blower over the filter surface. Bulb blowers must be periodically cleaned to prevent contaminating the surface. Alternatively, gently wipe dust from the filter surface with a camel hair brush. The brush must be periodically cleaned to prevent contaminating the filter surface.

4. Examine the filter surface. If no contamination remains, return the filter to the filter slide or packaging; no further cleaning is necessary. If contamination, such as fingerprints, is still present on the surface, continue with Step 5.

5. If contamination remains, apply a drop of spectroscopic grade isopropyl alcohol on an unused cotton swab and gently sweep the filter surface from edge to edge in a single direction only. This prevents debris from being dragged across the surface multiple times.

6. Examine the filter surface. If contamination remains, repeat step 5.
Installing and Removing Polarization Filters  
(FilterMax F5 Multi-Mode Microplate Reader only)

Acetate polarization filters used in fluorescence polarization measurements slide into place over the desired excitation and emission filters. Acetate filters are fragile and must be handled with care using tweezers. It is recommended that polarization filters only be changed by experienced users.

To help ensure that polarization filters are installed with the polarization axes oriented correctly, filter positions on the slide are grouped in pairs. The positions in a pair have different height and width dimensions. Only a polarization filter with the same dimensions as the desired position may be installed in that position. This prevents two filters with the same polarization axis from being installed next to each other.

To install or remove a polarization filter:

**CAUTION!** Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

1. Handling the polarization filter with tweezers, match the dimensions of the filter with the corresponding filter position on the filter slide.
2. To install a filter, gently slide the filter into the guide slots over the filter until it is securely in place (Figure 1-9).
3. To remove a filter, using tweezers, gently pull the filter free of the guide slots (Figure 1-9).

4. If removing a filter, immediately place the filter in the protective packaging supplied with the filter.
Selecting Microplate Types Suitable for Measurements

The type of microplate and the way it is handled can affect the measurement performance of the instrument. Plate height may not exceed 25 mm. Select a plate type with properties suited for the application and for use with multi-mode microplate readers. Table 1-2 lists microplate selection guidelines for each supported measurement type.

Plate handling guidelines include:
- Never touch the bottom of plates. Visually inspect the bottom of the plate before use to make sure it is free of dirt and contaminants.
- Keep unused plates clean and dry.
- Make sure the strips on strip plates are inserted correctly and level with the frame.
- Do not use V-bottom plates, unless performance has been tested and validated with this instrument. Irregular plastic density in the tip of the well may cause inaccurate measurements.

<tr>
<td>Absorbance</td>
<td>clear, UV-clear, white with clear bottom, or black with clear bottom</td>
<td>Clear polystyrene or film plates with transparent bottoms are suitable. Polystyrene or PVC plates do not provide sufficient optical quality. Reading at wavelengths below 340 nm generally requires using UV-clear plates. When an application specifies a surface treatment, only use plates with the correct treatment.</td>
</tr>
</tbody>
</table>
Loading and Unloading Microplates

The Load/Eject button on the front panel of the instrument allows microplates to easily be loaded and unloaded from the instrument. Plates may be loaded into the instrument in either portrait or landscape orientation.

To load or unload a microplate:

1. On the front panel of the instrument, press the Load/Eject button (Figure 1-10). The plate carrier moves outside the instrument.

2. Remove the microplate from or place it on the microplate carrier. Microplates may be placed on the plate carrier in either landscape or portrait orientation.

Note: In landscape orientation, well A1 is placed in the back left corner (Figure 1-11). In portrait orientation, well A1 is placed in the back right corner. If desired, opposite landscape and portrait orientations may be specified when protocols are run. Refer to the Multi-Mode Analysis Software User Guide.
3. Press the Load/Eject button (Figure 1-10). The plate carrier moves inside the instrument.

Performing Basic Maintenance and Troubleshooting

Overview

Several maintenance procedures may be performed by users to ensure the optimum operation of the instrument, including:

- Performing Preventive Maintenance on page 27
- Replacing the Deuterium Lamp (FilterMax™ F5 Multi-Mode Microplate Reader only) on page 28
- Replacing Fuses on page 30
- Troubleshooting on page 31
- Repacking the Instrument for Storage and Shipment on page 32

Performing Preventive Maintenance

To ensure optimum operation of the instrument, perform the following preventive maintenance procedures as necessary:

- Wipe up any spills immediately.
- Follow appropriate decontamination procedures as instructed by the laboratory safety officer.
- Contact a Molecular Devices Service Engineer to inspect the instrument every two years.
- Use a Multi-Mode Validation Plate to regularly validate the performance of the instrument. Contact a sales or service engineer for more details.
- Respond appropriately to any error messages displayed by Multi-Mode Analysis Software. Refer to the Multi-Mode Analysis Software User Guide for more information.
Replacing the Deuterium Lamp
(FilterMax™ F5 Multi-Mode Microplate Reader only)

The FilterMax F5 Multi-Mode Microplate Reader is equipped with a deuterium lamp, which is used in measurements made at wavelengths between 230 and 359 nm. The lamp needs to be replaced when Multi-Mode Analysis Software warns that lamp energy is too low to perform measurements.

Replacing the deuterium lamp requires a 2 mm Allen wrench and a 2.5 mm x 0.6 mm flathead screwdriver. The Allen wrench is provided with the instrument. The screwdriver is provided with the replacement deuterium lamp.

To replace the deuterium lamp:

1. Turn off power and disconnect the instrument from the power source before performing maintenance on the instrument. There is a risk of electric shock when the power is on.

2. Never view light from the deuterium lamp directly without approved eyewear. Protect skin from exposure to the light emitted by the lamp. The lamp emits UV radiation.

3. Turn off the instrument and allow a minimum of 30 minutes for the deuterium lamp to cool before servicing. During operation, the lamp reaches a temperature of approximately 250°C (482°F)

1. Turn off power and disconnect the power cable from the instrument.
2. On the top of the instrument case, use the supplied 2 mm Allen wrench to remove the two Allen screws that secure the lamp housing cover (Figure 2-1). The lamp and power connector are now accessible.
3. On the lamp power cable connector, press down on the locking clip to un latch the connector. With the clip unlatched, disconnect the lamp power cable from the instrument.
4. Loosen, but do not attempt to completely remove, the two flathead captive screws that secure the deuterium lamp. Captive screws are designed to remain connected to the lamp base.
5. Once cooled, remove the deuterium lamp and discard.

CAUTION! Do not touch the glass of the new lamp. Fingerprints on the glass may shorten the life of the lamp.

6. Taking care not to touch the glass bulb with bare hands, line up the alignment notch in the base of the lamp with the guide on the lamp block to position the new lamp correctly.

7. Tighten the two flathead captive screws to secure the new deuterium lamp.
Performing Basic Maintenance and Troubleshooting

8. Reconnect the lamp power cable, making sure the locking clip on the connector is latched.

Note: The lamp power cable connector is keyed, which prevents it from being connected incorrectly.

9. Replace the lamp housing cover and tighten the two Allen screws that secure it in place.

10. Reconnect the power cable to the instrument, and turn on power to the instrument.

Replacing Fuses

If the instrument will not power on or shuts down due to a power loss, or if the fuses appear burned, replace them. Fuses are located in the fuse carrier on the back of the instrument next to the power switch and power port (Figure 2-2).

To replace the fuses:

WARNING! Turn off and unplug power to the instrument before changing fuses. Failure to do so can cause electrical shock or equipment damage.

1. Turn off the main power to the instrument.
2. Unplug the power cord from the power port.

<tr>
<td>1</td>
<td>Power switch</td>
</tr>
<tr>
<td>2</td>
<td>Fuse carrier</td>
</tr>
<tr>
<td>3</td>
<td>Power port</td>
</tr>
</tbody>
</table>
3. Using a small flathead screwdriver, gently pry the fuse carrier loose and remove it from the instrument.
4. Gently pull old fuses from the carrier by hand.
5. Gently place new fuses into carrier by hand.

Note: Use the replacements fuses listed in Table A-1 on page 35.

6. Replace the fuse carrier.
7. Plug the power cable into the power port.
8. Turn on power to the instrument.

Note: If the instrument still does not power on after changing fuses, contact a Molecular Devices Service Engineer.

Troubleshooting

WARNING! Only officially trained service engineers may perform service procedures on the instrument. Contact a service engineer when service is required.

Perform the following troubleshooting techniques when necessary.

Performing Basic Maintenance and Troubleshooting

Repacking the Instrument for Storage and Shipment

To minimize the possibility of damage during storage or shipment, the instrument should be repacked only in the original packaging materials. Correctly repacking the instrument includes following appropriate decontamination procedures and installing the transport lock on the microplate carrier.

Note: You can order replacement packaging materials. Contract your local Molecular Devices representative.

The instrument should be stored in a dry, dust-free, environmentally controlled area. Refer to Table A-1 on page 35 for more information about acceptable storage environments.

CAUTION! Warranty claims are void if damage during transport is caused by improper packing.

To repack the instrument:

1. Follow appropriate decontamination procedures as instructed by the laboratory safety officer.
2. On the front panel of the instrument, press EX FILTER. The excitation filter slide unloads from the filter compartment and partially opens the compartment door.
   
   CAUTION! Handle filter slides by the tab only. Do not touch filter surfaces with fingers. Fingerprints left on filters negatively affect measurement results.

3. Open the compartment door all the way, grasp the slide by the tab, and pull it until it is free of the geared track.
4. Place the excitation filter slide in the toolbox supplied with the instrument.
5. On the front panel of the instrument, press EM FILTER. The emission filter slide unloads from the filter compartment and partially opens the compartment door.
6. Open the compartment door all the way, grasp the slide by the tab, and pull it until it is free of the geared track.
7. Place the emission filter slide in the toolbox supplied with the instrument.
8. On the instrument control panel, press the Load/Eject button to move the microplate carrier outside of the instrument.
9. Turn off power to the instrument.
10. Disconnect the power cable from the wall socket and power port on the back of the instrument.
    
   CAUTION! The transport lock must be installed to prevent the possibility of damage to the microplate carrier during transit.

11. Using the provided 2 mm Allen wrench, tighten transport lock screws #2 and #3 until each lock is fastened to the microplate carrier (Figure 2-3).
When the transport lock is securely fastened to the microplate carrier, gently push the carrier to the left of the microplate chamber until it stops. Next, push it straight back into the instrument until screw #1, which fastens the lock to the internal frame of the instrument, is lined up with the hole on the internal frame. The microplate chamber door must be held open manually until the transport lock is fastened.

Tighten screw #1 until the microplate carrier is securely locked in place.

Route the plastic tab connected to the transport lock so that it will pass over the top of the microplate chamber door when closed.

Gently close the microplate chamber door.

Disconnect the serial cable from the serial ports on the host computer and instrument.

Put the power and serial cables into the accessories box.

Wrap the instrument in static-free plastic.

Replace the molded foam packaging around the instrument.

Place the instrument and accessories box in the original shipping box.

Close the box using packing tape.
